Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Wheeler et al. Wheeler et al. shows an apparatus for forming a butt splice comprising: means, 48, for securing a portion of the web from the new roll against an anvil, 44; means, 88, for positively traversing a shear wheel assembly, 82 or 84, across a portion of the secured new roll of material wherein a rotary cutter, 92, trims the material along a cutting edge, 46, of the anvil; means, 58 or 60, for adhering a first piece of tape, 69, to a portion of the new roll of material extending beyond the trimmed leading edge; means, 48, for securing a portion of the web of the expiring roll against the anvil; means, 88, for positively traversing a shear wheel assembly, 82 or 84, across a portion of the secured expiring roll of material wherein a rotary cutter, 92, trims the material along a cutting edge of the anvil; means for adhering the trimmed trailing end of the expiring roll to the downstream portion of the first piece of tape; and means for releasing the new roll and the expiring roll from the anvil.

Regarding claim 3, Wheeler et al. also shows means for adhering a second piece of tape to the spliced joint on the side of the webs opposite to the first piece of tape (column 2, lines 58-63).

***Allowable Subject Matter***

3. Claims 4-14 are allowed.
4. The following is a statement of reasons for the indication of allowable subject matter: None of the prior art, either alone or in combination suggest a splicing apparatus wherein the cutting wheel has a cable wrapped around it so as to positively rotate the cutting wheel. Ryan, Page, and Wright each show a cable for driving a cutting wheel or blade across the width of a web but none of the cables are wrapped around a cutting wheel.

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. House et al., Forbes, and van Liempt et al. each show a cutting wheel traversing a web secured against an anvil in a splicing apparatus. Kaneko et al. and Taitel et al. show splicing webs after cutting them against anvils. Keene shows applying splicing tape to both sides of a splice.
